PHARMACEUTICAL COMPOSITIONS CONTAINING COMPOUNDS
WITH ACTIVITY FOR THE ENHANCEMENT OF ABSORPTION OF
ACTIVE INGREDIENTS

- 5 The invention described herein refers to pharmaceutical compositions, to the use of compounds as agents with activity for the enhancement of absorption of active ingredients and to specific compounds, all according to the general sections of claims 1, 2, 5, 6 and 10 hereinafter.
- The problems related to percutaneous absorption of active ingredients in
- 10 topical and transdermal pharmaceutical presentations (drug delivery systems) is known and has been the subject matter of patents [1]
- Percutaneous absorption: mechanisms-methodology-drug delivery, 2 Ed., Brouhaugh Maibach, MARCEL DEKKER INC.
- Among the most significant examples reported in scientific literature it is
- 15 possible to mention the enhancing activity of decylmethylsulfoxide in increasing percutaneous absorption of idoxuridine [2] Touitou, E. (1988), Int. J. Pharm. 43:1. The effect of dodecylazacycloheptan-2-one (Laurocapram, Azone) in enhancing absorption of various molecules was investigated by Stoughton [3] Stoughton, R. B. (1982), Arch. Dermatol.
- 20 118: 474 and by Sugibayashi [4] Sugibayashi, K., Hosoya, K. Morimoto, Y., and Higuchi, W. I. (1985), J. Pharm. Pharmacol. 37: 578.
- Substances made available on the market and initially used in fields other than the pharmaceutical sector, subsequently proved to be of remarkable

importance also for the pharmaceutical industry. Among these, we can find the Perfluoropolyether class of compounds (PFPE) [5] obtained by polymerization of hexafluoropropene with oxygen activated by UV radiation and subsequent treatment to obtain a cosmetic product [6] as an
5 excipient for preparations used in the manufacture of products with a barrier effect [7].

SUMMARY OF THE INVENTION

The following invention consists in the use of PFPE to enhance absorption
10 of pharmacologically active ingredients in topical pharmaceutical presentations and/or in transdermal formulations (drug delivery systems) containing mixtures of at least one active ingredient for the enhancement of absorption.

These compounds, if included in pharmaceutical presentations containing
15 an association or at least one active ingredient, can modify the permeating capacity of the active ingredients through the skin, demonstrating a surprising and unexpected capacity to promote the penetration of the active ingredient.

In accordance with the first aspect of the invention, inclusion of a quantity
20 of PFPE may be applied in traditional topical formulations such as, for example, but not limited to: creams, liquid emulsions, ointments, lotions, microemulsions, foams, gels, aspersion powders; and in transdermal formulations (drug delivery systems).

The term PFPE means molecules with a chemical structure

with molecular weights between 650 and 6250,

C.A.S. name: 1-Propene,1,1,2,3,3,3-hexafluoro-,oxidized and polymerized

C.A.S. number: 69991-67-9

Surprisingly, it was found that inclusion of a quantity of PFPE at
 10 concentrations between 0.01% w/w and 60% w/w, in topical and/or
 transdermal (drug delivery systems) formulations, increases the
 percutaneous absorption of active ingredients by over 5-20 times their
 normal value, thus enabling improved absorption and optimization of their
 systemic effects through suitable pharmaceutical presentations.

DETAILED DESCRIPTION OF THE INVENTION

Comprehension of the invention is facilitated by the description of a
 number of assessments on the percutaneous absorption of certain
 formulations containing different active ingredients.

20 **Example A** illustrates the increase in permeability by approx. 10 times of a
 formulation containing Troxerutine and 3% PFPE as compared with that of
 a reference formulation.

Example B demonstrates the correlation between PFPE concentration and percutaneous absorption of formulations containing Nimesulide and increasing concentrations of PFPE.

Example C contains a comparison of the permeation speed of formulations containing non-steroidal antiinflammatory drugs versus formulations to which 3% PFPE has been added.

Example A

Verification of the percutaneous absorption of TROXERUTINE through pig skin using various formulations containing different types of absorption enhancers. In particular, this involved investigation of the release of TROXERUTINE from formulations containing PFPE, Nor-chenodeoxycolic acid and transcutool, versus a reference formulation.

Experimental section:

Apparatus: Franz Cells (manufacturer: Crown Glass Company Inc., New Jersey)

Franz diffusion cells are one of the main systems used for the investigation of ex-vivo permeation. This study involved the use of three cells each with a 9 mm diameter donor compartment corresponding with a diffusion area of 64 mm². The receptor compartment has a capacity of 4.8 ml. The receptor chamber is heated to 37°C±1.

Test system: HPLC, Gilson, Mod. 305 with Spectra Physics detector, Spectra 200 Mod.

Preparation of the skin

The pig skin samples were taken from the internal ear of pigs that had just been sacrificed.

- 5 The samples were soaked in buffer solution at pH 7.4 for 24 hours at 4°C.

The sections of connective tissue and muscle were subsequently removed from the skin and the sample was cut into 2x2 cm squares.

The skin samples were stored at -20°C.

HPLC Operating Test Conditions

- 10 Column: KP 18, 5 micron Licrospher 100
- Mobile phase: 20% acetonitrile 80% phosphate buffer at pH 6.6
- Flow: 1 ml/min
- Pressure: 1.52 Kpsi
- Wavelength: 245 nm
- 15 RT: 8.51

Procedure

The pig skin is placed between the donor compartment and the receptor chamber with the external skin surface facing the upper compartment. The test formulation is placed inside the donor compartment.

- 5 The receptor chamber is filled with a phosphate buffer solution at pH 7.4 and at intervals between 0.5 and 8 hours, 2 ml of solution are drawn from this chamber. When each sample is taken fresh buffer solution heated to 37°C is added in order to replenish the initial volume. The samples are then tested using a HPLC method. Each test is repeated three times.

10 Results

The results on percutaneous absorption are summarized in the table below

INTERNATIONAL SEARCH REPORT

International application No.
PCT/IB 00/00167

Box I Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)

This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☐ Claims Nos.:
because they relate to subject matter not required to be searched by this Authority, namely:

2. ☒ Claims Nos.: 7,8
because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically:
see FURTHER INFORMATION sheet PCT/ISA/210

3. ☐ Claims Nos.:
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

Box II Observations where unity of invention is lacking (Continuation of item 2 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

1. ☐ As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims.

2. ☐ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.

3. ☐ As only some of the required additional search fees were timely paid by the applicant, this International Search Report covers only those claims for which fees were paid, specifically claims Nos.:

4. ☐ No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

Remark on Protest

- ☐ The additional search fees were accompanied by the applicant's protest.
- ☐ No protest accompanied the payment of additional search fees.

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

Continuation of Box I.2

Claims Nos.: 7,8

Present claims 7-8 relate to an extremely large number of possible active ingredients or classes of ingredients for the compositions as to claim 1. Support within the meaning of Article 6 PCT and/or disclosure within the meaning of Article 5 PCT is to be found, however, for only a very small proportion of the active ingredients the use of which is claimed. In the present case, the claims so lack support, and the application so lacks disclosure, that a meaningful search over the whole of the claimed scope is impossible. Consequently, the search has been carried out for claims 1-6, 9-12 only.

However, the search has been incomplete also for said claims 1-6, 9-12 for the following reason: for the independent claims 1,5,10 a lack of clarity within the meaning of Article 6 PCT arises to such an extent as to render a meaningful search of the claims impossible, because there appears to be an inconsistency between the formula in said claims and in the description and the CAS registry number quoted in the description, p.3. The latter registry number, 69991-69-7, appears to relate to known polyfluoropolyethers (present trade names galden and fomblin), which do not contain any peroxy function, which seems to be present in the formula in claims 1,5,10. Moreover, in claim 10 the wording relates to perfluoropolyESTERS, whereas the rest of the application documents appear to relate to perfluoropolyETHERS.

Consequently, the search has been carried out only for compounds defined by the registry number quoted on p.3 of the description, their compositions and uses as claimed.

The applicant's attention is drawn to the fact that claims, or parts of claims, relating to inventions in respect of which no international search report has been established need not be the subject of an international preliminary examination (Rule 66.1(e) PCT). The applicant is advised that the EPO policy when acting as an International Preliminary Examining Authority is normally not to carry out a preliminary examination on matter which has not been searched. This is the case irrespective of whether or not the claims are amended following receipt of the search report or during any Chapter II procedure.
